

LIVE SLOTS

EXCLUSIVE TO PLAYTECH

Live Slots is a new exciting concept, built around a community aspect of multiple players participating in the same spin on a slot game. Led by our Live slots host, providing commentary and player engagement while the reels are spinning creating a unique game show feel. Players participate by using our user friendly Autoplay feature, giving them more time to enjoy the game and chat with the host and players through our enhanced chat system featuring our first emoji chat tool.

The first Live Slots game will be *Buffalo Blitz*.

RTP : 95.96%

The pay table is the same as for Playtech's Buffalo Blitz.  
A three-point capping mechanism ensures maximum casino exposure:

- The **maximum win multiplier on a round** (either regular or a "free games" bonus round) is capped
- The **maximum win for a round** is capped (for all players together)
- The **maximum number of players** on the table is capped per casino

## BASICS

- The game rewards customers according to the symbols appearing on the reel set, once the slot has concluded a spin
- Players can participate in rounds via Autoplay, by making a buy-in and selecting the conditions – bet per spin and number of rounds
- Occasional bonus rounds feature free games with random multipliers applied to the wins
- For the purpose of winning calculations, coin value is used. Coin values can be between \$0.01 to \$5 and are always equal bet/40; Hence, bet per spin can be between minimum of \$0.40 and maximum of \$200.

## GAME FLOW

- Player enters the slots game table
- Spins happen automatically every few seconds
- Upon starting the session, the player is prompted to buy in (number of spins and bet per spin) and configure the Autoplay
- After clicking on 'Start', the player participates from the next spin
- Balance is changed during every spin
- When there is a winning combination of the symbols, player gets the win added to his balance immediately after the spin and a winning notification is displayed. Spins continue without stopping
- The player can stop the Autoplay at any given moment and will not be included in the next spin. Players can also restart the Autoplay at any given moment.
- Every once in a while there are special bonus rounds called 'Free Games', during which the studio and the Host interact.

## FREE GAMES

In the free games bonus round, the host celebrates, pushing a large button to start the round.

When the free games round is finished, the player will see an outro screen showing the player's 'Total Win'. As Autoplay ends after the free games round, there will be a 10–20 seconds host celebration segment, giving players the time to set new Autoplay settings. Normal gameplay resumes when the host hits the button again.

Free spins is widely familiar bonus tool in Casino and with Playtech's Buffalo Blitz it has finally arrived to Live Casino market. Cross-sell to Live has never been easier, you can give free spins bonuses and control the value of the spins the same way as for any of the Casino slots – through the IMS platform.

## CHAT & STICKERS

Always visible chat is used for Slots. The player will also be able to use a game-specific animated sticker panel, opened via a special button in the UI. Tapping on a sticker sends it to the chat with some animation. More stickers will be added in the future.

## SPLIT-SCREEN WITH SPIN A WIN

On mobile clients, players will be able to try out a brand new gaming experience – a Split-Screen mode that separates the portrait mode screen with the Slots game at the top and Spin a Win at the bottom. This allows experienced players to enjoy both games at once.
